

# 1-Cyclopropyl-1H-Pyrazole

Pyrazole and its derivatives have pharmacological activities such as anti-microbial, anti-tumor, anti-viral, anti-depression, etc. The introduction of other cyclic groups on pyrazole can generate a large number of lead compounds, among which the introduction of cyclopropyl plays a variety of roles in drug molecules:

- ◆ Plasma clearance reducing
- ◆ Receptor affinity enhancing
- ◆ Off-target effects decreasing
- ◆ Peptide hydrolysis limiting
- ◆ Blood-brain barrier permeability increasing
- ◆ Drug dissociation improving

It is currently being widely used in drug research by companies such as Merck & Co., Inc. and Hansoh Pharma.
