

Restricted and controlled substances

Chemspace is not in a business of selling any unlawful or restricted compounds. But some molecules listed on Chemspace may be subject to regulations, restrictions, and export control laws that applied globally or are country-specific. These compounds have been added to the Chemspace Database by the Suppliers. By using our Website, you acknowledge that Chemspace is not responsible for the information provided by Suppliers in their catalogs.

Chemspace reviews its Database on the regular basis and marks the restricted or controlled substances as “Restricted substance”.

While selecting the structure as “Restricted substance”, we are guided by the following regulations:

- LIST OF DUAL-USE ITEMS AND TECHNOLOGY referred to in Article 3 of Regulation (EC) No 1334/2000 - Dual-use items are goods, software and technology that can be used for both civilian and military applications.
- Chemical Weapons Convention – Chemical Weapon is a specialized munition that uses chemicals formulated to inflict death or harm on humans.
- DEA/Controlled Substances Act – Substances, which are in some manner regulated under existing United States law and are placed into one of five schedules. This placement is based upon the substance’s medical use, potential for abuse, and safety or dependence liability.
- California Proposition 65 - Toxic substances that may cause cancer and birth defects.
- Pharmaceuticals - Substance used in the diagnosis, treatment, or prevention of disease and for restoring, correcting, or modifying organic functions.
- Montreal Protocol – Ozone Depleting substances - are those substances, which deplete the ozone layer.
- Single Convention on Narcotic Drugs – List of drugs divided into 4 schedules, where drugs range from most restrictive to least restrictive.
- Convention on Psychotropic Substances – A list of psychotropic substances, ranging from Schedule I (most restrictive) to Schedule IV (least restrictive).

Additionally, **Chemspace reserve the right to remove unlawful or restricted substances from its Database.**

The sale of “Restricted substances” requires a license, a permit or an authorization given by the competent authority to the Supplier. Currently, Chemspace does not request that the Suppliers provide the licenses, permits and authorization for sale of such compounds and **the Suppliers are solely responsible for the items provided in their Catalogs.**

Contacting the Supplier to inquire “Restricted substances” via chem-space.com, it is **your responsibility** to:

- request the Supplier to provide the appropriate license, permit or authorization to sell restricted substances;
- obtain the corresponding license to import and use these Substances as may be required by the competent authority.
